New HOKE O-RING SEALED

in design...

Hoke engineered this new valve to do away with traditional valve maintenance headaches and performance problems. Look carefully at these engineering features designed to improve performance and lower maintenance costs on your equipment.

- ▶ Easy-grip die-cast aluminum handwheel provides exactly the right amount of closing force.
- ▶ Centerless ground type 303 stainless steel spindle eliminates binding.
- ▶ O-ring stem seal does away with packing leaks and adjustments, permits finger-tip control.*
- ▶ Back-seating feature permits packing or O-ring replacement under pressure.
- ▶ Self-aligning spindle makes it easy to shut off tight (without using wrenches) throughout the life of the valve.

*Packing available for high temperature or corrosive service.

**Typical
uses**

in appearance...

This neat, trim valve, carefully finished on the outside as well as within, will add sales appeal to your hydraulic or pneumatic equipment. For instrument panels and test stands, panel mounting is available including a black, plastic handwheel.

Bar stock needle valves are designed for throttling and shutoff of water, oil, gas and other fluids in applications such as these:

- AIRCRAFT & AUTOMOTIVE TEST STANDS
- HYDRAULIC EQUIPMENT
- PNEUMATIC EQUIPMENT
- GAS ANALYZERS
- PILOT PLANTS
- TEST INSTRUMENTS
- TOOLS & FIXTURES

BAR STOCK NEEDLE VALVES

270 series specifications

MATERIALS Available in brass, carbon steel, 430F chrome stainless and type 316 stainless (for extremely corrosive conditions). A combination valve with carbon steel bonnet and 430F chrome stainless body is available for high temperature service. All valves are equipped with type 303 stainless steel spindles except for PY270 series (all 316 SS).

STEM SEAL Buna-N type synthetic rubber O-ring is standard except as follows:

Corrosive service—Type 316 stainless steel valves (PY series) are Teflon packed.

High temperature service—The PCF series is equipped with high temperature asbestos packing.

Graphite, asbestos packing is available for any valve on order.

SIZES Globe pattern— $\frac{1}{8}$ " to $\frac{1}{2}$ " female pipe threads; angle pattern— $\frac{1}{8}$ " to $\frac{3}{8}$ " female pipe threads. Male—female ends and other special combination ends are available when ordered in production quantities.

IMPORTANT NOTE: Brass & 430F stainless & carbon steel valves are normally supplied with "O" ring stem seal. If asbestos type packing is required, change Cat. No. prefix from R to P and specify "asbestos packing" on your order.

280 series metering valve specifications

The 280 series is a modified bar stock valve for precision flow control. It has a long, fine needle point (8° included angle) and a micrometer spindle thread, 20 turns to open (See outline drawing). Two orifice sizes are available $\frac{1}{16}$ " and $\frac{1}{8}$ " (See flow curves on back page). The 280 series is made only in brass with O-ring stem seal. For other specifications, see 270 series above.

NOTE: Metering valves are supplied with black plastic handwheels

high vacuum service

These valves equipped with O-ring stem seal, are suitable for non-critical high vacuum service. For such applications, it is advisable to specify valves "HELIUM LEAK TESTED" on your order.

panel mounting

Both the 270 and the 280 series are available for panel mounting with lock nut and serrated black plastic handwheel. To order panel mounting valves, add the prefix letter "D" to the catalog number (example DRB 270) and specify "PANEL MOUNTING" on your order. Panel hole size required: $41/64$ " ($49/64$ " for $\frac{1}{2}$ " size).

FLOW CHARACTERISTICS FOR BAR STOCK VALVES

These flow curves show the excellent control obtainable with minimum pressure drop in the 270 series.

These flow curves for the 280 series metering valves show the remarkable range of control afforded by the 20-turn spindle and 8° angle spindle point.

OTHER HOKE PRODUCTS

FORGED NEEDLE VALVES

Designed for leak-tight, long life service in applications where quality of design and manufacture is important. Bodies withstand 2000 psi and integral bonnet construction is simplest and strongest available design. Write for Bulletin NV 555.

PRESSURE REGULATORS

Use for accurate control of compressed gasses at reduced pressure. Standard models available to adjust delivery pressures as high as 3000 psi and as low as 0.1 psi. See Bulletin PR 455.

STAINLESS STEEL CYLINDERS

Pressure sample containers in sizes from 10cc to 1 gal.; pressure ratings up to 1800 psi available equipped with valves and safety devices. Write for Bulletin SC 455.

TOGGLE VALVES

Hoke toggle valves fit right into design of quality test equipment from aircraft test stands to gas analyzers. Quick, positive action, vacuum-tight seal and easily identified position add to the value of any instrument. Flip...they're completely on; flip...they're completely off! Write for Bulletin NV 555.

PACKLESS VALVES

Diaphragm and bellows types in brass, stainless steel and Monel for critical high vacuum and corrosive service. Bulletin BV 854.

FLO-GAGES

Variable area type flowmeters for laboratory, instrument panel and pilot plant applications. Ask for Bulletin FG 455.
